BEYOND PROJECT MANAGEMENT

Skill Mapping: Improve People's Engagement and Boost your Business Performance

In a competitive and constantly evolving environment, it becomes of strategic relevance to face uncertainties with a structured approach. In order to catch the market opportunities and together with the implementation of a flexible structure and organizational alignment, companies must invest and enhance the professional and personal contribution of the internal resources. Skill Mapping allows enterprises to better understand their internal talents, to identify development areas, to plan training initiatives and to implement a constant monitoring activity on the organizational growth and engagement rate. Mapping competences is one of the key process inside organizations allowing the latter to sustain the competitive advantage and strategic assets throughout time.

JUNE

BEYOND PROJECT MANAGEMENT

Change Management: Remove Cross Functional Barriers

To implement innovative technologies, to seize new market opportunities and to improve key issues, companies must put in place projects and initiatives aimed at improving the company's structure, processes and tasks. Resistance to change is an issue to which companies must consequently face with. Managing that in a structured way is fundamental in order to achieve the advantages change generates. Change Management strategies provide companies a structured approach to successfully implementing the change process. Dealing with uncertainties enables companies to get the competitive advantage coming from their ability to face effectively the evolution's changes. With Change Management you will understand your company's structures, processes, projects and competences..

SEPTEMBER

BEYOND PROJECT MANAGEMENT

Risk Management: Evaluate, Accept, Control and Mitigate Uncertainty

Business is about taking risks. Companies must identify risks, evaluate their impact on business, recognize methods to decrease uncertainty and understand the opportunities coming from instability. Knowing, evaluating and reducing risks are key activities companies must put in place in order to increase their competitive advantage and achieve the strategic and established business goals. Risk Management provides enterprises the necessary tools and methodologies for implementing coherent and monitored actions.

MAY

BUSINESS PROCESS MINING

From **Robotic** Process Automation to **Intelligent** Process Automation

Robotic Process Automation can help companies in simplifying their business procedures. Achieve digital transformation, increase the quality of the services or products provided, improve the delivery service or reduce costs are just few examples of the benefits Robotic Process Automation could provide to enterprises. This process consists of integrating applications, restructuring work resources and using software applications throughout the organization. The Intelligent Process Automation is a step ahead of RPA. That can help companies in identifying bottlenecks and improving the operational efficiency. The aim of IPA is to provide enterprises with accurate information about what work items exists, how long it takes to complete the work and what is the average waiting time.

OCTOBER

DIGITAL OPERATING MODELS

Next Generation **Operating Models** for the Digital World

Digital Transformation is about the implementation of innovative digital technologies in every aspect of people's life and this generates a consequent change. Against this transformation, also organizations must reconstruct their approach to the market both by developing their approach to the market and by offering innovative products and services. Generating a positive, significant, tangible and stable improvement by acting on each single asset and on their interaction, must be the company's main final goal.
